

**IN THE CLAIMS**

Claims 1-10 (cancelled).

Claim 11 (originally filed). Apparatus for fabricating a rolled food item, comprising, in combination: means for providing a strip of support material and food, with the strip of support material and food having a trailing edge and a leading edge, with the food having a tackiness; means for rolling the strip of support material and food into a roll having a periphery and a center, with the support material located on the outside of the roll, with the trailing edge located on the periphery of the roll and with the leading edge located adjacent the center of the roll; means for spraying a deposit of a source of moisture at least on the food adjacent to the trailing edge prior to its rolling into the roll, with the source of moisture increasing the tackiness of the food sufficient to be adherable to the support material in the roll to at least temporarily prevent unintentional unrolling of the roll.

Claim 12 (originally filed). The apparatus of claim 11 wherein the strip of support material and food has an elongated length between the trailing and leading edges; and wherein the deposit has a length considerably shorter than the elongated length of the strip of support material and food.

Claim 13 (originally filed). The apparatus of claim 12 wherein the strip of support material and food comprises the strip of support material having side edges and a strip of food having side edges spaced inwardly of the side edges of the strip of support material, with the leading and trailing edges of the strip of food being coextensive with the leading and trailing edges of the strip of support material, with the deposit having side edges spaced inwardly from the side edges of the strip of food and having a trailing edge coextensive with the trailing edge of the strip of food.

Claims 14-20 (canceled).
